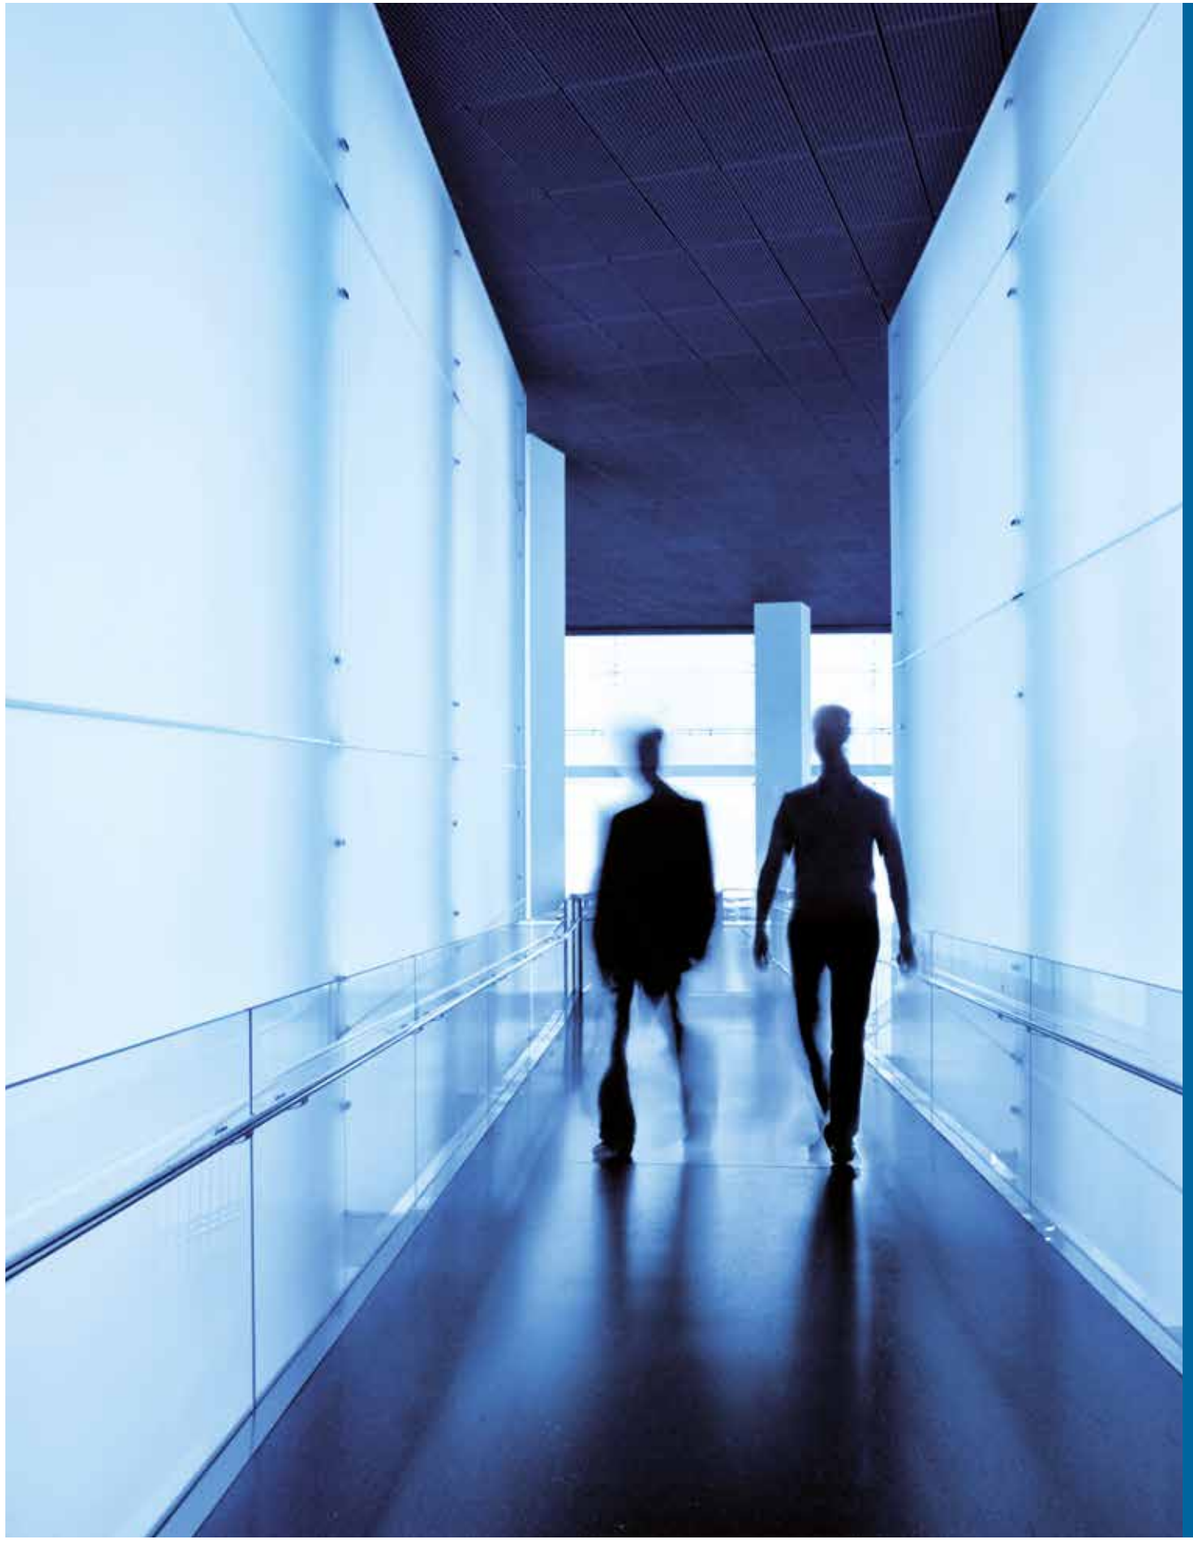
ABOUT NEBİM

As Nebim, we are among the most well-established independent software developers of Turkey.

We develop ERP (Enterprise Resource Planning) and store software optimized for retail, wholesale and manufacturing industries. Our experience dates back to 1966, and we are experts especially on ready-to-wear, clothing, footwear, big stores, home textiles, carpets, furniture, glassware, optics, cosmetics, accessories and other retail industries. The software we have developed is being currently used in more than 40 countries. Together with our Solution Partners, we provide services for thousands of companies of different sizes, starting from independent stores with a single user to multi-company entities with operations on many countries.

Our clients use the Nebim V3 software that we have developed in their headquarters and their manufacturing facilities in order to manage all their business processes on the same platform in a completely integrated manner; from purchasing to manufacturing, from warehouse management to product distribution and logistics processes, up to finance management and human resources management. At the same time, our clients also manage their store inventory, back office processes and the retail transactions at the cash register with Nebim V3.

The software that we develop helps our clients to manage their business processes efficiently as they can make use of their company resources in the most effective way.



NEBİM HISTORY

1966 Nebim starts as the IT center of a famous brand of the era, Neyir Örme Sanayii A.Ş. (Nebim Knitwear Inc.), on an infrastructure based on IBM Unit Record in order to provide services regarding manufacturing, chronometry, ordering, store monitoring and accounting to the company.

1970 Following the procurement of one of Turkey's first IBM System/360 mainframe computers, office services begin to be provided to other companies in addition to Neyir Örme Sanayii A.Ş.

1977 A separate incorporation is formed by being separated from Neyir Örme. Its new name is Nebim Neyir Bilgisayar Sanayii ve Hizmetleri A.Ş. (Nebim Neyir Computer Industry and Services Inc.)

1981-1982 The company becomes the Texas Instruments distributor for Turkey and starts selling hardware. A technical service unit is established within the company for service and maintenance of hardware products. The headquarters move to Dedeman Commercial Building in Istanbul, where the company has continued up until today. A regional office is established in Ankara and thus the area of activity is expanded.

1988 The company becomes an Independent Software Vendor by creating a business model where it develops a standard "Package Software", grants licenses for it and offers support.

1995 A distribution channel is established so that the solutions are spread throughout Turkey.

1997 The company enters a strategic partnership with Microsoft; starts developing software on a Client/Server software infrastructure offering a graphic user interface based on Microsoft Windows, which functions on Microsoft SQL Server.

2000-2001 Nebim Winner, one of Turkey's first Enterprise Resource Planning - ERP products with a graphic user interface that functions on a relational database, is introduced.

2004 Nebim ends hardware sales and technical service activities and starts focusing solely on software development. Subsequently, the transformation into an Independent Software Company is completed. New solution partners are added to the distribution channel so that services can be rendered to all Turkey. The strategic cooperation with Microsoft that has been going on since 1997 is strengthened, and Nebim becomes a Microsoft Gold Certified Partner.

2010 Together with 60 solution partners all around Turkey; Nebim becomes Turkey's leader in ready-to-wear industry, footwear, chain stores, department stores and optical software by providing services to more than 10.000 companies and 90.000 users that use Nebim solutions.

2011 Nebim V3, which Nebim has been developing since 2005, is introduced to the users. This new ERP product allows for the efficient use of resources with wholly integrated management processes, is based on targets, and functions on a flexible and scalable platform.

2017 With more than 65 solution partners in Turkey and abroad, Nebim continues to be the leader of Turkey in ready-to-wear, footwear, chain stores, department stores and optical software by providing services to more than 10.000 companies in total, and to more than 3.000 companies that use Nebim V3 and that manage their sales and inventory operations with Nebim V3 in more than 40 countries, 16 languages and more than 500 stores abroad.
